

# cPanel Overview

cPanel allows domain owners to manage and monitor their web site. This easy to use interface is packed full of useful features. Inside cPanel, domain owners can control their web site to a degree which was never before possible. cPanel gives domain owners a flexibility beyond that of the competition.

The use of cPanel allows domain owners to perform tasks that would normally not be possible. Domain owners can create email accounts, password protect directories, upload files, install software, and more. All without using the command line!

## Ease of Use

cPanel is so easy to use that any customer can pick up the software and start working on their site instantly. Everything they need is only a few clicks away. With tool tips for every function, customers will have a hard time getting lost!

Getting to the tasks you need to perform is crucial, and getting to them quickly is easy with cPanel 11. With usability in mind for the new design, there are many new features that make cPanel 11 the easiest to use cPanel yet!

## Getting Started Wizard

The new getting started wizard walks a new account owner through setting up the aspects of a web hosting account. From email to web disk access, the wizard will get your clients up and running in no time at all!

## One-click Feature Access

The home screen of cPanel clearly lays out the options that are available to users so they can locate and access them quickly. Even better, the menus can be rearranged by simply dragging and dropping them to put the most used features at your fingertips. Menus that are not needed can be minimized to save space but are easily accessed if needed.

## Integrated Content Relevant Help

Clicking the Help button on a page within the cPanel interface will provide your clients with a description of the concept behind that feature or function. It will also provide a quick link to the full interface documentation which has been reworked to provide more content and understanding.

## Enhanced Notifications and Error Messages

It's important to keep on top of what's going on with your hosting account. To ease this process, a new notices area provides information about access, email account disk usage issues, and more. Along with these notices, the Stats area has been enhanced to provide easily identifiable visual clues to the status of an account. With a quick glance, it's easy to make sure everything is under control.

## Enhanced Information Display

It's important to be able to access specific accounts and settings quickly. With this in mind, the display of large quantities of information has been reworked for cPanel 11. Tables are sortable by many different aspects, visual feature queues have been added throughout the interface, and zooming has been added to keep your information within a reasonable screen size. With these new information display enhancements, your clients can quickly locate and access accounts and features, while keeping a close eye on their account.

### Web Disk Access

New Web Disk Access allows your clients to put a shortcut on their desktop to their hosting account. They can then drag and drop files to their account just like it is part of their local filesystem. This feature allows for easy publishing and eliminates the need for for FTP or publishing software.

### Email User Filters

Email users can now add account specific filters to route their email. This new, easy to use interface provides all the flexibility and usability of a desktop mail client's filtering system.
